

Kodak
IMAGELINK™

HQ Microfilm
FS Microfilm

The reliable image, any way you read it.

The family of *Kodak Imagelink™* Microfilms is the result of over 80 years of continuous product improvements. They deliver the best quality and performance ever from Kodak. They feature a patented breakthrough in emulsion-coating technology for unsurpassed reliability, handling, and consistent performance that results in digital-ready film images. You receive sharp, bright, clear images for reading, printing, and/or scanning. No matter what your application requirements, you'll find an *Imagelink* Microfilm to match.

KODAK IMAGELINK HQ MICROFILM: PERFORMANCE.

Imagelink HQ Microfilm is designed to deliver ultra-high resolution images in rotary and planetary equipment. This film is an excellent choice for scanning images for digital systems. It provides high-contrast images for viewing, printing, or digital scanning.

With *Imagelink* HQ Microfilm, you'll see outstanding image quality at high reductions, such as engineering drawings, architectural renderings, books, and newspapers. It also provides excellent results in equipment used for microfilming general business documents.

KODAK IMAGELINK FS MICROFILM: PRODUCTIVITY.

While *Imagelink* FS Microfilm shares many of the characteristics of *Imagelink* HQ Microfilm, it is designed to give you an advantage in higher-speed microfilming equipment. When filming checks, correspondence, invoices, and other business documents, *Imagelink* FS Microfilm is the ideal choice for producing high-quality images in high-speed proof encoders, camera-sorters, and rotary microfilmers.

Kodak Imagelink Microfilms fit a high-performance profile.

KODAK IMAGELINK MICROFILMS: PROTECTION.

Kodak Imagelink Microfilms share a range of important attributes that will pay off today and prepare you for tomorrow.

- **Clear, bright images.** Optimum sharpness and grain characteristics produce images that are easier to read on the screen and give you a foundation for digital scanning.
- **Maximum productivity and less wasted film.** Roomlight loading adds convenience by reducing fogged images and refilming hassles. You get more usable images from every roll.
- **Quality images for quality reproductions.** Lower minimum density enhances duplication characteristics for better print quality, fewer equipment adjustments, and higher overall productivity.
- **Clear, clean screen images.** Minimized dye stain makes a visible difference in every image you view.
- **Outstanding consistency with complete production control.** Emulsion uniformity enables you to get high-quality results with fewer equipment adjustments and less operator intervention.
- **Optimized, process-survivable anti-stat coating.** Won't be washed away. That means less dust, cleaner-reading images, more reliable duplication and retrieval, and less hardware maintenance.

- **Special antihalation layer.** Prevents light reflection and scattering during actual filming for outstanding image sharpness and quality.
- **Excellent transportability.** Improved frictional characteristics reduce film jams and abrasion to improve reliability in capture and retrieval equipment.
- **Wide washing latitude.** Exceptional washing characteristics for cleaner processed film and clearer images.

A WORD ABOUT PROCESSING QUALITY.

For best results with *Imagelink* Microfilms, always use *Kodak* Chemicals. These products are formulated to exacting standards and are designed and tested to work together to yield the optimum speed, contrast, and detail we build into the films.

PUT THE RELIABLE IMAGE TO WORK FOR YOU.

Kodak Imagelink Microfilms are available in a range of roll sizes and package configurations to meet virtually any imaging requirement. For more information on these films or *Kodak* Products, contact your *Kodak* representative or authorized reseller or distributor.

Complete technical information for the camera negative family of *Kodak Imagelink* Microfilms may be found in technical data sheet D-30.
